

Do you want to breathe new life into old system?

Make your current system modern and functional with Camline modernisations.

Modernisation does not always have to mean building a whole new system. With Camline modernisation you can re-use the working parts of your existing system and replace only those elements that need to be replaced.

Camline's over 15 years of experience in modernisation projects guarantee that whether your system is an automated warehouse, FMS, sheet metal system or for example a paternoster, modernisation of both storage and crane control plus mechanical modernisation is done flexibly, speedily and reliably.

Breathe new life into old system

- old systems become modern and functional
- utilisation of existing elements
- modernisation of those elements that need to be renewed
- modernisation of every manufacturers system
- machines from different manufacturers can be integrated into the same system
- modernisation of storage and crane control
- mechanical modernisations
- integration into other data systems in the company
- genuinely user-friendly software
- editable software
- data is not stored into components but database, thus the data can be easily restored if needed
- latest standard components
- old logic components are replaced thus spare parts and support are available
- easy and fast repair and maintenance
- wireless data transfer
